ABOUT ME

A third-year Software Engineering student passionate about game development. I love learning new technologies and building engaging, high-quality gameplay experiences.

EDUCATION

- Software Engineering at Hanoi University of Industry - Year 3 student (Current GPA: 3.4x/4.0)

TECHNICAL SKILLS

- Good foundation in C# .Net, OOP, Design Patterns, SOLID.
- Basic experience with Unity 3D.
- Understand game optimization and resource management fundamentals.
- Can write simple Custom Editor Tools (IMGUI/UIToolkit).
- Able to integrate third-party plugins to speed up game development.
- Experienced in publishing a game on Google Play.
- Able to use Version Control: Git - GitHub, basic Git Workflow.

MY PROJECTS

7-8/2025

FOOD RUSH

3D casual game project (Android)

- Implemented core gameplay features: PlayerControls/Interaction/Map/Skin/Reward/Exchanging,...
- Managed game resources using Addressable.
- Used patterns: Singleton, ObjectPool, Observer, PubSub, MVC
- Used packages such as: DoTween, UniTask,... and other tools for Editor, Debugging.
- Integrated Firebase (RealtimeDB), Google OAuth2, Unity Ads (Legacy), and Unity IAP.
- Optimized for mobile, target OPPO A3s - android 8.x archieve~60 FPS.
- Successfully published on GooglePlay with target 3+ age: Food Rush on GooglePlay

7/2024

MARIO KART (PROTOTYPE)

3D racing game: Mario Kart (Windows)

- A Mario Kart clone project created to learn and experiment with new game development concepts.
- Developed a physics-based Kart Controller.
- Used Object Pool pattern, technologies: Input System and LeanTween.
- Implemented MVP pattern for the presentation layer, separate views and gameplay logic
- Public project: Mario-Kart-Demo
